ABOUT ME

I am a person with a strong commitment to innovation and continuous improvement in the projects I carry out. I am motivated by constant learning and by exploring new technological tools that can enrich my skills in the future. My goal is to expand my knowledge in the field of IT and provide effective solutions to the challenges I face.

UNIVERSITY EXPERIENCE

During my studies, I have developed several university projects, which have allowed me to gain deeper knowledge in my field. In addition, they have helped me develop different technical and practical skills.

Biomedical Analysis Project

Classification Problem – Genes

Differentiation of ovarian cancer subtypes

Teamwork

Role: Leader

I was responsible for supporting the whole team. I prepared the final presentation and reviewed all the content before submission. In terms of programming, I used the BlockForest model through RStudio. As a result, we were able to predict cancer subtypes with good accuracy using omics variables.

Deep Machine Learning Project

Binary Classification Problem

Use of Natural Language Processing

Pair work

Using *Python*, we applied several Transformer models to predict whether texts were conspiratorial or critical. To do this, we first carried out a preprocessing stage on four texts written in two different languages. The project was successful, achieving an *accuracy of 0.96*.

Customer Relationship Management Project

Focused on Customer Segmentation

Understanding how Solar Sverige manages its customers

Teamwork (Erasmus+)

Role: Coordinator

We conducted an interview with key questions for the company Solar. Based on their answers, we developed a complete report. My part focused on how the company managed *customer feedback*. I was responsible for supervising all the content and also created the full presentation to make it more visually appealing. Finally, we achieved an excellent result, as we combined the theory learned in class with the company's responses, obtaining the highest grade.

PROFESSIONAL EXPERIENCE

Private Mathematics Tutor

2021 - 2024

Internship at Minsait (Indra)

February 2025 - August 2025

Team: Transformation & AI

Developed a COBOL documentation tool using AI tools with LangChain in Python. During this experience, I also began developing my knowledge of Generative AI by working with RAG, chunks, embeddings, and learning how to apply them to initial projects.

AI Analyst at Minsait (Indra)

September 2025 - Present

Team: Transformation & AI

- Designed *AI-driven low-code* solutions focused on agent orchestration, including an end-to-end claims assistant, developed using *IBM watsonx Orchestrate*.
- Developed a *Generative AI-based fake news detection system* using LLMs and RAG. The system retrieves information from a database of verified news articles and compares the user's query with the most similar chunks. Then, using prompting and contextual information, the LLM determines whether the news item is true or false.
- Currently developing *Generative AI initiatives* to be presented to clients, focused on detecting fake documents, videos, and images through LLM-based solutions.

SKILLS

- Machine Learning & AI.
- Generative AI / LLMs / RAG.
- Prompt Engineering
- Data Bases
- Power BI & Tableau.
- Python, R & SQL.

LANGUAGES

- English (B2) - *Preparing for C1*
- Spanish (Native)
- Valencian (C1)

ADDITIONAL TRAINING

- **Build Professional Web Applications with Python**
Udemy
 - **Introduction to Microsoft Azure for Beginners**
Udemy
 - **LangChain and LLMs: Develop AI Applications in Python**
Udemy
 - **Git + GitHub: A Complete Version Control System from Scratch**
Udemy
- **7 training courses on watsonx.ai**
IBM
 - **3 training courses on watsonx Orchestrate**
IBM
 - **6 training courses on watsonx Code Assistant**
IBM
 - **2 training courses on watsonx Governance**
IBM

EDUCATION

Bachelor's Degree in Data Science
2021 - 2025
Average grade: 8

Polytechnic University of Valencia

Final Degree Project: "Development of an LLM-Based Intelligent Assistant for the Automation of Data Analysis and Visualization"
Grade: 9

Erasmus + Programme
September 2024 - January 2025
Average grade: 8.4

Chalmers University of Technology,
Gothenburg

Science Baccalaureate
2019 - 2021
Average grade: 9.53

Colegio María Auxiliadora
Salesianas
